                                                                                                                                            ö
               The present sequence represents a BASBO24 outer membrane protein of Neisseria meningitidis. The BASBO24 polynucleotide sequence was first identified in the Incyte Pathoseq database containing unfinished genomic DNA sequence of N. meningitidis. BASBO24 polypeptides and polynucleotides are useful for generating an immune response in an animal. Antibodies specific BASBO24 polypeptides are useful for recating an are useful for treating N. meningitidis infection, which causes bacteremia and meningitis.

```
The present sequence represents a BASB024 outer membrane protein of Neisseria meningitidis. The BASB024 polynucleotide sequence was first identified in the Incyte Pathoseq database containing unfinished genomic DNA sequence of N. meningitidis. BASB024 polypeptides and polynucleotides are useful for generating an immune response in an animal. Antibodies specific BASB024 polypeptides are useful for treating N. meningitidis infection, which causes

The present sequence represents a BASBO24 outer membrane protein of Neisseria menigitidis. The BASBO24 polynucleotide sequence was first identified in the Incyte Pathoseq database containing unfinished genomic DNA sequence of N. meningitidis. BASBO24 polypeptides and polynucleotides are useful for generating an immune response in an animal. Antibodies specific BASBO24 polypeptides are useful for rreating N. meningitidis infection, which causes bacteremia and meningitis.

They are encoded by open reading frames (ORFs) AAZ11972-Z12358. The antigenic proteins, their incleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids

They are encoded by open reading frames (ORFs) AAZ11972-Z12358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SGIVSLNIRGDSGFGRVNTMVDGITQTFYSTSTDAGRAGGSSQFGASVDSNFIAGLDVVK 153

                                                                                                                                                                                                                                                                                                         and N. gonorrhoeae antigenic proteins. They are encoded by open reading frames (ORFS) AAZ11972-Z12358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 20; Length 922;

They are encoded by open reading frames (ORFs) AAZ1972-21238. The antipenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as menhogitus, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful

12;
The present sequence is BASB021 polypeptide, which shows sequence homology with Serratia marcescens HasR outer membrane haem-binding protein. It is encoded by DNA from Moravalla catarhalis strain Mc2931 (ATCC 43617). BASB021 polymucleotides and polypeptides may be used for prognosis, staging of disease, determining response to drug treatment and drug screening. They can be used in vaccines for generating an immune response and for preventing or treating Moravalla infections which may cause otitis media, pneumonia, sinusitis, nosocomial infections and invasive diseases, auditive nerve damage, delayed speech learning, infection of upper respiratory tract and inflammation of the middle ear. Anti-BASB021 antibodies can be used to diagnose and treat Moraxella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            277

This invention relates to a vaccine composition which contains BASB070 polypeptides from Haemophilus influenzae and/or the nucleotide sequences that encode them. BASB070 DNA sequences encode proteins which are integral outer membrane proteins with a beta-barrel conformation. The invention includes BASB070 nucleotide and protein sequences from H. influenzae strains RKW20 and ntHi3224. The invention includes an expression vector and recombinant live microorganism comprising a BASB070 protein, an antibody specific for the two BASB070 proteins of the invention, and a method for the production of a BASB070 proteins of the invention, and a method for diagnosing an H. influenzae infection. Hemophilus influenzae is a common cause of pneumonia, exacerbation of chronic bronchitis, sinusitis and outtis media, and H. influenzae type broads bacterial meningitis and systemic diseases. The vaccine exhibits antibacterial activity, and is used in the preparation of an agent for use in generating an immunological response in a mammal.

The present sequence represents a BASB070 protein isolated from the influenzae strain RGKW20. The protein is used in the production of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16;
Vaccinating against Haemophilus influenzae using BASB070 polypeptides and/or the nucleic acids that encode them -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           293

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a vaccine composition which contains BASB070 polypeptides from Haemophilus influenzae and/or the nucleotide sequence that encode them. BASB070 DNA sequences encode proteins which are integral outer membrane proteins with a beta-barrel conformation. The invention includes BASB070 nucleotide and protein sequences from H. influenzae strains RGKW20 and ntHi3224. The invention includes an expression vector and recombinant live microorganism comprising a BASB0 polynucleotide sequence, a process for the production of a BASB070 protein, an antibody specific for the two BASB070 proteins of the invention, and a method for diagnosing an H. influenzae infection.
                                                                                         740
                                                                                                                                                   800
                                                                                                                                                                                802
                                                                                                                                                                                                               860

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        496
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              556
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             742
Haemophilus influenzae is a common cause of pneumonia, exacerbation o chronic bronchitis, sinusitis and otitis media, and H. Influenzae typ causes bacterial meningitis and systemic diseases. The vaccine exhibit antibacterial activity, and is used in the preparation of an agent fouse in generating an immunological response in a mammal.

The present sequence represents a BASB070 protein isolated from H. influenzae strain ntHi3224. The protein is used in the production the vaccine of the invention.
                                                                                                                                                                                                                                                                                                                                                 177
                                                                                                                                                                                                                                                                                                                                                                                                                                  227

They are encoded by open reading frames (ORFS) AAX11972-212358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria Infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                               Neissería meningitidis antígen encoded by a partíal ORF133.

The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Escherichia coli; B2/D+A-; antiinflammatory; antibacterial; immunosuppressive; extra-intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia;

The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53094) of nature B2/D+A-. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     οŧ
                                                                                                                        Escherichia coli; B2/D+A-; antiinflammatory; antibacterial; immunosuppressive; extra intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia; pyelonephritis; antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             161

                                                                                                                                                                                                                                                                                                                                        This sequence represents the transferrin binding protein from Neisseria gonorrheae. Transferrin is an iron-regulated, outer membrane protein involved in uptake of iron, an essential nutrient for the growth of N. Gonorrheae and N. Meningitidis. A similar sequence from N. Meningitidis is shown in AAY07477. N. Gonorrheae and N. Meningitidis are two pathogens of the genus Neisseria that are genetically similar, but pathologically different. The growth of these cells can be inhibited by reducing the ability of these cells to take up iron, e.g. by blocking the transferrin receptor function. The transferrin binding proteins can be used to raise antibodies for inhibiting the activity of the transferrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 63 VSTRQDIFKSSE-NLDNIVRSIPG-AFTQQDK--SSGIVSLNIRGDSGFGRVNTMVDGIT 118

```
s invention describes a novel isolated and purified nucleic acid (I) oding an immunogenic, C-terminally truncated analog of one of the makerrin receptor proteins TDb1 or TDb2 of Haemophilus influenzae ch has antibacterial activity. (I) are used for recombinant duction of truncated TDb; as probes and primers for detecting, and guosing infection by, Haemophilus, also for isolating similar uences from other bacteria; as immunogens for vaccinating against ections caused by bacteria that produce transferrin receptors, e.g. mophilus, Neisseria or Branhamelia. The truncated proteins are useful immunogens (as above); for diagnosing infection (as antigens in unoassays) and for raising antibodies, used for diagnosis of actions or for passive immunization. This sequence represents the 1sferrin receptor protein TDb1 isolated from Neisseria gonorrheae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
